DETAILED ACTION

Allowable Subject Matter

Claims 2-12, 25-33, 45-46 are allowed.

Claims 2-12, 25-33, 45-46 are allowable over the prior art of record for at least the reason that even though the prior art discloses display systems comprising rotating diffraction gratings, wherein one or more electrical coils causing the rotation of the diffraction gratings are movable relative to a fixed magnetic component, the prior art fails to teach or reasonably suggest, regarding claims 2-12, 45, a display comprising a broadband source, an eye station, one or more coils fixed relative to an element carrying a magnetic component and a holographic pattern of a diffraction grating, wherein said holographic pattern rotates about a pivot to generate selected diffracted energy at said eye station for forming a display, and regarding claims 25-33, 46, a method for generating a display comprising the steps of providing a broadband source, providing an eye station, providing one or more coils fixed relative to an element carrying a magnetic component and a holographic pattern of a diffraction grating, wherein said holographic pattern rotates about a pivot to generate selected diffracted energy at said eye station for forming a display, as set forth by the claimed combination.

The rotating diffraction grating disclosed by Welbourn is not part of a display system, but is used as a component in a laser system, or a wavelength division multiplexer (WDM), or an optical communications system (e.g., wavelength selection and optical switching), see second paragraph in p. 1. As such, the device of Welbourn lacks a broadband light source (being used

only with narrow band lasers instead) and an eye station. As part of a laser cavity or an optical fiber communication system, there is no viewer involved with the rotating grating of Welbourn. Regarding the rotating diffraction grating of Odhner (US 5,613,022), said grating is part of a system where the electric coil is movable relative to a fixed magnet as opposed to the claimed movable coil/fixed magnet system.
